Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-35, and 56-63, drawn to an apparatus, classified in class 606, subclass 61.
- II. Claims 36-50, drawn to an apparatus, classified in class 606, subclass 69.
- III. Claims 51-55, drawn to an apparatus, classified in class 606, subclass 73.
- IV. Claims 64-72, drawn to a method, classified in class 606, subclass 60.

The inventions are distinct, each from the other because of the following reasons:

The inventions I and II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require a spanning portion being offset from the at least one plane defined by the end portion. The subcombination has a separate utility such as a bone plate.

The inventions I and III are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination

Art Unit: 3733

does not require that the subcombination have a pivot portion about a pivot point at the head of the bone anchor. The subcombination has a separate utility such as a bone screw.

The inventions I and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP 806.05(h)). In the instant case, the product can be used for fixing vertebrae relative to each other instead of decompressing the spinal canal.

The inventions II and III are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require a bone anchor having a rod-receiving portion. The subcombination has separate utility such as a bone screw.

The inventions II and IV are related as product and process of use. The product can be used as a bone plate for securing adjacent bone structures instead of being used for decompressing the spinal canal.

Art Unit: 3733

The inventions III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP 806.05(h)). In the instant case, the product can be used as a bone screw for securing plates or other orthopedic devices in the body other than the spinal canal.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

The inventions are distinct, each from the other because of the following reasons:

Conclusion

Any inquiry concerning this communication from the examiner should be directed to Andrew Yang whose telephone number is 571-272-3472. The examiner can normally be reached Monday-Friday 7:30 am – 5:00 pm EST.

If attempts to reach the examiner by telephone are unsuccessful the examiner's supervisor, Eduardo Robert can be reached at 571-272-4719. The fax number for the organization where this application is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status

Art Unit: 3733

information for unpublished applications is available through Private Pair only. For More information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact Electronic Business Center (EBC) at 866-217-9197 (toll free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (USA OR CANADA) or 571-272-1000.
